

White Ink Visibility Guide

“White Ink Crystal”

White Ink Crystal is available in Decorative or Privacy and is opaque white ink printed on clear film. Crystal film is the least private option and allows visibility into the space through the clear film.

“White Ink Etch”

White Ink Etch is available in Decorative or Privacy and is opaque white ink printed on etch film. Etch film provides ultimate privacy, with no ability to see into the space, while allowing light to pass through.

“White Ink Custom”

Olee Creative’s White Ink options can also be faded from a higher gradient level (more opaque) to a lower gradient level (less opaque) to add a gradual sense of privacy to your space.

White Ink Custom Gradient Scale

(Visual coverage shown below)

**This rendering is for illustrative purposes only and the actual appearance will vary depending on the light source, background colors and images.

White Ink Custom Options

The gradient on our White Ink Custom Options can be adjusted to achieve the desired level of privacy required for your space and application. White Ink can be printed on Crystal or Etch film, increasing the options and allowing for various levels of privacy. The higher the gradient level, the more opaque the ink is. 100% gradient allows no visibility through the ink and is 100% opaque. As the gradient level decreases, more visibility through the ink is achieved. The scale below is representative of the high level of privacy you can achieve with White Ink - the rendering is for illustrative purposes only and actual appearance will vary depending on the light source, background colors and images. Please contact your Olee representative for samples that can show you exactly what can be expected with our White Ink Custom Options.

White Ink Custom Gradient on Crystal Film

White Ink Custom Gradient on Etch Film

Visit oleecreative.com to view our full line of pre-designed patterns.

**Disclaimer: Privacy level is contingent upon lighting and proximity of objects to film.*

DECORATIVE GLAZE
